

## S RANGE

Designed specifically to deal with limescale in high pressure steam boilers. The s Range enables the use of untreated water for the steam boiler - straight from the mains or the bore hole. Limescale on boiler tubes very quickly leads to a large drop in efficiency and requires the use of expensive and onerous chemical treatment.

The s Range is designed to address the effects of new and existing hard limescale encrustation and is suitable for high pressure steam boilers. Standard units are available up to 120mm in diameter.

Ø UP TO 120MM

- New Limescale
- Existing Limescale
- Suitable for high pressure steam boilers
- Units available for pipes up to 120mm in outside diameter
